**SPECIFICATIONS**

**DisplayPort 1.4 / USB-C/ eDP Module**

**Version** DisplayPort 1.4a

**Standard Formats** VESA, CTA

**Connectors/Ports**
- DP Full-Size: Tx (1) DP Full-size; Rx (1) DP Full-size
- USB-C: Rx (1) USB-C with DP Alt Mode; Tx (1) USB-C with DP Alt Mode
- eDP Header: Pins to access eDP Tx backlight controls
- Aux Chan Adjunct Board: Tx (1), DP Full-size; Rx (1) DP Full-size
- Protocol: DisplayPort

**Video Data Rates** 1.62, 2.7, 5.4, 8.1 Gb/s Link rates

**Color Depths** 8, 10, 12, 16 bits

**Video Encoding** RGB, YCbCr

**Video Sampling Modes** 4:4:4, 4:2:2, 4:2:0

**16DP**
- Versions 2.2 & (1.3 on 1 & 2 lanes only)

**Audio**
- 8 Channel LPCM programmable sine wave
- Capture memory 8 GB

**Options**
- DisplayPort Tx / Rx
- Passive Aux Channel Analyzer
- DP Passive Aux Channel Analyzer
- DP Capture Analysis of DSC Stream
- DP Video Generation of DSC/FEC Streams
- DP HDCP 2.2 Compliance Test
- DP 1.4 Source Link Layer Compliance (Package #3)
- DP 1.4 Sink Link Layer Compliance (Package #4)
- DP 1.4 Sink Link Layer Compliance (Package #4)
- DP 1.4 Source DSC Compliance
- DP 1.4 Sink DSC Compliance
- Embedded DisplayPort (eDP), 1.4

**980 Test Platforms**
- Embedded Display: 980B: 15” diagonal: Resolution: 1024(H) x 768 (V) resolution; 24 bit RGB color.
- Power: 90-264 VAC, 47-63Hz
- Weight: 23.76 LBS; 10.78 Kg
- Size: 980B: Height: 15.25 in. (38.7cm) Width: 15.28in. (38.7cm) Depth: 6.29in. (15.9cm)
- Command Line Control: Ethernet (RJ-45) for external GUI and telnet
- Environmental: Operating Temp: 32 to 104 (F); 0 to 40 (C)

**Key Features**
- Run DisplayPort functional tests and protocol compliance tests up to full DP 1.4 specification
- Equipped with both DP standard and USB-C ports for Tx and Rx function—all test features supported through either type of connector
- View Power Delivery (PD) negotiations for USB-C DP
- Run functional tests on displays and monitors up to 8.1 Gb/s link rates with large format and test patterns including compliance tests
- Generate Display Stream Compression (DSC) select patterns and configure slices and video parameters
- Configure link training parameters to test display performance
- View EDID and DPCD registers
- Access DSC Test CRC registers for automated verification of DisplayPort DSC compression
- Test DP sources up to 8.1 Gb/s link rates; view incoming video and meta-data including DSC compressed—from a source device in real time
- Capture and decode incoming video, protocol and control packets—including Display Stream Compression (DSC)
- Monitor Aux Channel transactions as a DP source or sink
- Passively monitor Aux Channel between a source & display even at 8.1Gb/s link rates
- Run DP 1.4 Link Layer compliance tests on sources and sinks up to 8.1 Gb/s link rates
- Run DP 1.4 EDID compliance tests on sinks
- Run DP 1.4 Forward Error Correction (FEC) compliance tests
- Run DP 1.4 Display Stream Compression compliance tests for sources and sinks
- Run DPC-approved HD3.2 compliance tests on DisplayPort sources, sinks and repeaters
- Audio testing using programmable LPCM sine wave audio tones and compressed formats
- Run tests on embedded DisplayPort (eDP) 1.4b sources and panels using fast link training and ALPM
- Test eDP backlight control functions on panel using either backlight control pins or Aux Channel control commands

**Source Testing**
- The 980 DP 1.4 Video Generator / Analyzer module supports a comprehensive range of functional and compliance testing for video, audio and protocol of DisplayPort devices. The module supports 1.62, 2.7, 5.4 & 8.1 Gb/s data rates on 1, 2 & 4 lanes on its Tx video generator port and its Rx analyzer port for both the standard DP ports and the new USB-C ports with DP Alt Mode.
- The module’s protocol analyzer supports real time analysis and deep analysis using captures of incoming DisplayPort streams from source devices including DSC/FEC compressed streams. The module’s test data generator can be used for testing displays, USB-C adapters, extenders, etc. The module is equipped with all the standard video timings and test patterns for 1.4b modality displays.
- The 980 DP 1.4 Video Generator / Protocol Analyzer module supports a full suite of link layer and NEW! EDID compliance tests for both sources and sinks including compliance tests for forward error correction (FEC). The module supports USB-C and USB-C-Tx and Rx ports support Auxiliary Channel analysis of the DP Aux Channel, and the USB-C ports support Aux Channel Analysis of the USB-C Configuration Channel. An included Aux Channel monitoring board supports passive monitoring of the DP aux channel via full-size DisplayPort connectors, between a source and display. This enables analysis of link training and HDCP interoperability between devices.
- For developers of Embedded DisplayPort (eDP), the new module offers the necessary support for a variety of optional eDP features. Initial support includes fast link training, alternate scrambler seed, Advanced Link Power Management (ALPM) and Tx backlight control. A pin header is available to provide access to the backlight Tx test.

**Display Testing**
- The 980 DP 1.4 Video Generator / Analyzer module supports video, audio and protocol test functions of high-end DP displays. The modules supports 1.62, 2.7, 5.4 & 8.1 Gb/s data rates on 1, 2 & 4 lanes on both its Tx ports and its Rx ports.
- The module also supports DP 1.4 Link Layer HDCP 2.2 compliance testing for DisplayPort source, sink and repeater devices and link layer compliance testing for sink devices.
Video Generation
The 980 DP 1.4 Video Generator / Analyzer module supports video and audio functional testing at link rates up to 8.1 Gb/s on 1, 2 and 4 lanes to support high resolution formats. The module has an extensive set of video formats and library of test patterns. You can set any pattern in motion to test motion artifacts with the Image Shift feature.

Audio Testing
The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

Video Generation
The 980 DP 1.4 Video Generator / Analyzer module supports video and audio functional testing at link rates up to 8.1 Gb/s on 1, 2 and 4 lanes to support high resolution formats. The module has an extensive set of video formats and library of test patterns. You can set any pattern in motion to test motion artifacts with the Image Shift feature.

Audio Testing
The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

Protocol Testing
The 980 DP 1.4 Video Generator / Analyzer module offers a variety of features for testing DisplayPort protocols. You can verify HDCP 1.3 and HDCP 2.2 authentication transactions between the module’s Tx port and a DP display. The module’s EDID Decode feature enables you to examine the EDID of the connected display. The DPCD Decode feature enables you to examine the DPCD registers of the connected display. You can read the EDID and/or the DPCD of downstream MST nodes.

Link Training Control and Configuration
The module’s link training control feature enables you to configure the link training parameters during testing. You can set limits on the lane count and link rate and allow the link training engine to establish link training based on those limitations or you can force link training parameters—lane count, link rate, voltage swing, pre-emphasis.

Alt Mode Negotiation
The USB Type C Transmit connector participates in discovery, power contract negotiation, and DP Alt Mode negotiation. The protocol messages can be monitored on the Auxiliary Channel Analyzer (right).
DISPLAY TESTS – VIDEO/AUDIO TESTING

Video Generation
The 980 DP 1.4 Video Generator / Analyzer module supports video and audio functional testing at link rates up to 8.1 Gb/s on 1, 2 and 4 lanes to support high resolution formats. The module has an extensive set of video formats and library of test patterns. You can set any pattern in motion to test motion artifacts with the Image Shift feature.

Audio Testing
The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

The 980 DP 1.4 Video Generator / Analyzer module supports video and audio functional testing at link rates up to 8.1 Gb/s on 1, 2 and 4 lanes to support high resolution formats. The module has an extensive set of video formats and library of test patterns. You can set any pattern in motion to test motion artifacts with the Image Shift feature.

Audio Testing
The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

DISPLAY TESTS - PROTOCOL TEST FEATURES

Protocol Testing
The 980 DP 1.4 Video Generator / Analyzer module offers a variety of features for testing DisplayPort protocols. You can verify HDCP 1.3 and HDCP 2.2 authentication transactions between the module’s Tx port and a DP display. The module’s EDID Decode feature enables you to examine the EDID of the connected display. The DPCD Decode feature enables you to examine the DPCD registers of the connected display. You can read the EDID and/or the DPCD of downstream MST nodes.

Link Training Control and Configuration
The module’s link training control feature enables you to configure the link training parameters during testing. You can set limits on the lane count and link rate and allow the link training engine to establish link training based on those limitations or you can force link training parameters—lane count, link rate, voltage swing, pre-emphasis.

HDCP 2.2 Test
The USB Type C Transmit connector participates in discovery, power contract negotiation, and DP Alt Mode negotiation. The protocol messages can be monitored on the Auxiliary Channel Analyzer (right).

Alt Mode Negotiation
The USB Type C Transmit connector participates in discovery, power contract negotiation, and DP Alt Mode negotiation. The protocol messages can be monitored on the Auxiliary Channel Analyzer (right).
SOURCE TESTS – CAPTURE & DECODE FOR DEEP

Capture and Decode
The 980 DP 1.4 USB-C Video Generator / Analyzer captures and decodes the main link attributes in order to diagnose interoperability issues related to them. The Protocol Analyzer captures & stores main link data and provides visibility into main stream attributes, secondary data elements, K-Characters and protocol errors. The Protocol Analyzer presents these elements on a graphical timeline and in a table. You can search for data and select any transaction in the table to view its details. The capture utility also enables you to capture specific MST streams from the source.

DP Alt Mode Negotiation
The 980 DP 1.4 USB-C Generator / Analyzer USB-C Rx connector participates in discovery, power contract negotiation, and DP Alt Mode negotiation. The protocol messages can be monitored on the Auxiliary Channel Analyzer.

Real Time Analysis (Basic Analyzer)
The 980 DP 1.4 USB-C Video Generator / Analyzer’s Real Time analysis feature enables you to view the incoming video, lanes and link rate, timing, colorimetry and various other metadata in real time at a glance. The Real Time mode provides a basic confidence test to verify that the incoming video is essentially correct. The Rx port emulates any EDID on to test a source devices handling of various EDIDs. You can also configure DPCD registers for emulating on the DP Rx port using the DPCD Editor (below).

Aux Channel Analyzer
The 980 DP 1.4 USB-C Video Generator / Analyzer module’s Auxiliary Channel Analyzer (ACA) feature enables you to monitor the DP Aux Channel for link training and MST negotiations, HDCP transactions and EDID exchanges between the DP 1.4 module and a connected source. The ACA logs these events and assigns precise timestamps to them. You can view the details of each transaction. These ACA logs can be saved and disseminated for further analysis by colleagues and other subject matter experts.

(Passive) Auxiliary Channel Analyzer
The 980 DP 1.4 Video Generator / Analyzer module’s Adjunct Auxiliary Channel Analyzer board enables you to monitor the DP Aux Channel for link training and MST negotiations, HDCP transactions and EDID exchanges between a DisplayPort source and display device. This enables developers to investigate interoperability problems between DisplayPort source and display device. Solution is provided using a custom cable provided by Teledyne LeCroy. The ACA logs these events and assigns precise timestamps to them. You can view the details of each transaction. These ACA logs can be saved and disseminated for further analysis by colleagues and other subject matter experts.

DPCD Editor

DP Connection Sequence with DP Alt Mode Negotiations
DISPLAY STREAM COMPRESSION (DSC) TESTING

DSC Analysis
The 980 DP 1.4 Video Generator / Analyzer module’s DSC analysis feature enables developers to view the DisplayPort DSC related protocol elements such as the picture parameter set, end of chunk packets and compression flag settings in the VBID to ensure that these elements are occurring in the video stream and that they are occurring in the proper sequence. The DSC analysis feature also captures and decompresses the video frames enabling developers to examine them for compression artifacts. The Forward Error Correction (FEC) transport mechanism, which ensures reliable, error-free video transport, can also be verified.

DSC Analysis showing Picture Parameter Set (PPS)

ACA showing DPCD reads for DSC capabilities

ACA DPCD Reads for DSC Capabilities
The 980 DP 1.4 Video Generator / Analyzer module’s ACA utility provides a log of the Aux Channel transactions. The link training can be viewed as well as the DPCD register reads and writes involved in the setup and maintenance of Display Stream Compression (DSC) and Forward Error Correction (FEC).

Video Generation (DSC/FEC)
The module’s DSC/FEC video generator feature enables display developers to transmit DSC/FEC streams. Users can select from several test patterns and configure the colorimetry, bits per component, bits per pixel, line buffer bit depth and DSC slice configurations.

DSC / FEC Video Generation

DISPLAY STREAM COMPRESSION (DSC) COMPLIANCE

DSC Compliance
The 980 DSC source and sink compliance tests are ideal for pre-testing your DisplayPort source, sink or repeater product prior to submission to an Authorized Test Center for approval. Pre-testing provides assurance that your product will pass at the ATC when submitted. The compliance tests enable you to view the auxiliary channel analyzer traces logged during the test to help diagnose the cause of compliance test failures. (Refer to the test setups on the previous page.)

The 980 DP 1.4 USB-C/eDP Video Generator / Analyzer supports testing of both eDP source and display subsystems. A standard DP connection from the 980 DP 1.4 eDP-capable module to a test fixture is required to enable connection to the eDP subsystem. For display panel TCON testing, once the connection is made, you can use the Advanced Link Power Management (ALPM) feature to test the display’s ALPM function (right) and run any other video tests using the DP 1.4 module’s Video Generation function. For eDP source subsystem testing, you can monitor the link training and ALPM state and run captures for analysis, etc. The test setups are shown below.

Embedded DisplayPort eDP - ALPM

The 980 DP 1.4 USB-C/eDP Video Generator / Analyzer supports testing of both eDP source and display subsystems. A standard DP connection from the 980 DP 1.4 eDP-capable module to a test fixture is required to enable connection to the eDP subsystem. For display panel TCON testing, once the connection is made, you can use the Advanced Link Power Management (ALPM) feature to test the display’s ALPM function (right) and run any other video tests using the DP 1.4 module’s Video Generation function. For eDP source subsystem testing, you can monitor the link training and ALPM state and run captures for analysis, etc. The test setups are shown below.

**Options**

**DisplayPort Tx / Rx**

- DP Tx for display testing; selectable between DP Standard and USB-C
- DP Rx port, two options; selectable between DP Standard and USB-C
- Basic Analyzer
- Capture/Store Protocol Analyzer (requires Basic analyzer option)

**DP Passive Aux Channel Analyzer**

- Monitor DisplayPort transaction in real time passively between a source or sink. Includes custom cable and Aux Adjunct board.
- Capture and analyze incoming Display Stream Compression (DSC) streams. There are no limits on the number of DSC slices for analysis.
- Select from a variety of DSC/FEC test patterns. Select colorimetry and configure slices. There are no limits on the number of DSC slices supported.

**DP Video Generation of DSC/FEC Streams**

- Configure link training parameters to test display compliance.
- Video EDID and DPDC registers.
- Access DSC Test CRC registers for automated generation of DSC/ECC compression.

**DP HDCP 2.2 Compliance Test**

- Run HDCP 2.2 compliance test on DisplayPort sources, sinks and repeaters.
- Generate Display Stream Compression (DSC) select patterns and configure slices and video parameters.
- Configure link training parameters to test display compliance.
- View EDID and DPDC registers.

**DP 1.4 Source Link Layer Compliance (Package #3)**

- Run DisplayPort 1.4 source Link Layer compliance test.
- Select source DSC set and test pattern library.
- Perform automated verification of source DSC streams.
- Test source or sink.
- Passive AUX channel analysis.

**DP 1.4 Sink Link Layer Compliance (Package #4)**

- Run DisplayPort 1.4 sink Link Layer compliance test (displays).
- Select source DSC set and test pattern library.
- Perform automated verification of sink DSC streams.
- Test source or sink.

**NEW DP 1.4 Sink EDID Compliance**

- Run DisplayPort 1.4 sink EDID compliance test (displays).
- Select source DSC set and test pattern library.
- Perform automated verification of sink EDID streams.

**DP 1.4 Source DSC Compliance**

- Run DisplayPort 1.4 Source DSC compliance test.
- Select source DSC set and test pattern library.
- Perform automated verification of source DSC streams.

**DP 1.4 Sink DSC Compliance**

- Run DisplayPort 1.4 Sink DSC compliance test.
- Select source DSC set and test pattern library.
- Perform automated verification of sink DSC streams.

**Embedded DisplayPort (eDP) 1.4 Compliance**

- Test eDP source and display devices using fast link training, Advanced Link Power Management (ALPM) and backlight control testing of displays.

**980 Test Platforms**

**Teledyne LeCroy quantumdata™ 980 DP1.4/USB-C/eDP Video Generator / Protocol Analyzer**

**Video Generation and Analysis**

- Testing up to 8.1Gb/s Link Rates
- Link, FEC & DSC Compliance Suites now Approved

**Key Features**

- Run DisplayPort functional tests and protocol compliance tests up to full DP 1.4 specification
- Equipped with both DP standard and USB-C ports for Tx and Rx function—all test features supported through either type of connector
- View Power Delivery (PD) negotiations for USB-C DP mode
- Run functional tests on displays and monitors up to 8.1 Gb/s link rates with large format and test pattern library
- Generate Display Stream Compression (DSC) select patterns and configure slices and video parameters
- Configure link training parameters to test display compliance
- View EDID and DPDC registers
- Access DSC Test CRC registers for automated generation of DSC/ECC compression
- Test DP sources up to 8.1 Gb/s link rates; view incoming video and meta-data including DSC compressed—from a source device in real time
- Capture and decode incoming video, protocol and control packets—including Display Stream Compression (DSC)
- Monitor Aux Channel transactions as a DP source or sink
- Passively monitor Aux Channel between a source & display even at 8.1Gb/s link rates
- Run DP 1.4 Link Layer compliance tests on sources and sinks up to 8.1 Gb/s link rates
- Run DP 1.4 EDID compliance tests on sinks
- Run DP 1.4 Forward Error Correction (FEC) compression tests
- Run DP 1.4 Display Stream Compression compliance tests for sources and sinks
- Run DP-ACPR approved DSC/FEC compressed tests on DisplayPort sources, sinks and repeaters
- Run audio tests using programmable LPCM sine wave audio tones and compressed formats
- Run tests on embedded DisplayPort (eDP) 1.4b sources and panels using fast link training and ALPM
- Test eDP backlight control functions on panel using either backlight control pins or Aux Channel control commands

The Teledyne LeCroy quantumdata 980 DP1.4/USB-C/eDP Video Generator / Protocol Analyzer module provides an unprecedented combination of functional and compliance testing for video, audio and protocol of DisplayPort devices. The module supports 1.62, 2.7, 5.4 & 8.1 Gb/s data rates on 1, 2 & 4 lanes on its Tx video generator port and its Rx analyzer port for both the standard DP ports and the new USB-C ports with DP Alt Mode. The module’s protocol analyzer supports real time analysis and deep analysis using captures of incoming DisplayPort streams from source devices including DSC/FEC compressed streams. The module’s video generator can be used for testing displays, USB-C adapters, extenders, etc. The module is equipped with all the standard video timings and test patterns necessary for testing modern displays.

The 980 DP 1.4 Video Generator / Protocol Analyzer module supports a full suite of link layer and NEW EDID compliance tests for both sources and sinks including compliance tests for forward error correction (FEC). The module supports DP1.4, USB-C and Rx ports support Auxiliary Channel analysis of the DP Aux Channel, and the USB-C ports support Aux Channel Analysis of the USB-C Configuration Channel. An included Aux Chan monitoring board supports passive monitoring of the DP aux channel via full-size DisplayPort connectors, between a source and display. This enables analysis of link training and HDCP interoperability between devices.

For developers of Embedded DisplayPort (eDP), the new module offers the hardware necessary to support a variety of optional eDP features. Initial support includes fast link training, alternate scrambler seed, Advanced Link Power Management (ALPM) and Tx backlight control. A pin header is available to provide access to the backlight Tx test.

The module can be equipped in the 980B Test Platform and controlled either through the embedded 980 GUI Manager or the PC-based GUI Manager.

**Source Testing**

The 980 DP 1.4 Video Generator / Analyzer module emulates a DP display device (sink) for analyzing source devices. There are two options for the analysis function for testing DisplayPort source devices:

- **Basic Analyzer** – Provides real time viewing of video and metadata for functional testing.
- **Capture/Store Protocol Analyzer** – Provides capture and store of the main link including protocol and control packets, main stream attributes and secondary data.

**Display Testing**

The 980 DP 1.4 Video Generator / Analyzer module supports video, audio and protocol functional testing of high-end DP Display. The module supports 1.62, 2.7, 5.4 & 8.1 Gb/s data rates on 1, 2 & 4 lanes on both its Tx ports and its Rx ports.

The module also supports DP 1.4 Link Layer HDCP 2.2 compliance testing for DisplayPort source, sink and repeater devices and link layer compliance testing for sink devices.
