**SPECIFICATIONS**

**DisplayPort 1.4 / USB-C / eDP Module**

**Version**
DisplayPort 1.4a

**Standard Formats**
VESA, CTA

**Connectors/Ports**

- **DP Full-Size**
  - Tx (1) DP Full-size; Rx (1) DP Full-size
  - Tx (1) USB-C with DP Alt Mode; Rx (1) USB-C with DP Alt Mode

- **NEW** USBC
- **NEW** eDP Header
- **Aux Chan Adjunct Board**
  - Tx (1), DP Full-size; Rx (1) DP Full-size

**Protocol**
DisplayPort

**Video Data Rates**
1.62, 2.7, 5.4, 8.1 Gb/s Link rates
1.2, 2, 4 Lanes

**Color Depths**
8, 10, 12, 16 bits

**Video Encoding**
RGB, YUV, CCR

**Video Sampling Modes**
4:4:4, 4:2:2, 4:2:0

**HDCP**
Version 2.2 & (1.3 on 1 & 2 lanes only)

**Audio**
8 Channel LPCM programmable sine wave

**Capture memory**
8 Gbytes

---

**Options**

- **DisplayPort Tx / Rx**
  - Either or both:
    - DP Tx for display testing; selectable between DP Standard and USB-C
    - DP Rx port, two options; selectable between DP Standard and USB-C
  - **Basic Analyzer**
  - Capture/Store Protocol Analyzer (requires basic analyzer option)

- **DP Passve Aux Channel Analyzer**
  - Monitor DisplayPort Aux Channel transactions in real time passively between a source or sink. Includes custom cable and Aux Adjunct board.

- **DP Capture Analysis of DSC Streams**
  - Capture and analyze incoming Display Stream Compression (DSC) streams. There are no limits on the number of DSC slices for analysis.

- **DP Video Generation of DSC/FEC Streams**
  - Select from a variety of DSC/FEC test patterns. Select colorimetry and configure slices. There are no limits on the number of DSC slices supported.

- **DP HDCP 2.2 Compliance Test**
  - Run HDCP 2.2 compliance test on DisplayPort sources, sinks and repeaters (3 separate options) — Now approved by DCP.

- **DP 1.4 Source Link Layer Compliance (Package #3)**
  - Run DisplayPort 1.4 source link layer compliance test. (Sections: 4.3.1, 4.3.2, 4.3.9, 4.4.4, 4.5.1 [FEC])

- **DP 1.4 Sink Link Layer Compliance (Package #3)**
  - Run DisplayPort 1.4 sink link layer compliance test (displays). (Sections: 5.2.1, 5.3.1, 5.3.2, 5.4.1/2/5.4.3, 6.4, 5.6.1 [FEC])

- **DP 1.4 Source DSC Compliance**
  - Run DisplayPort 1.4 source DSC compliance test. Section 6.4.1.

- **NEW** DP 1.4 Sink DSC Compliance
  - **UPDATED** Run DisplayPort 1.4 Sink DSC compliance test. Section 5.6.1, NEW 5.6.2

- **Embedded Display (eDP) 1.4b**
  - Test eDP source and display devices using fast link training. Advanced Link Power Management (ALPM) and backlight control testing of displays.

---

**980 Test Platforms**

- **Embedded Display**
  - 980B: 15” diagonal; Resolution: 1024(h) x 768 (v) resolution; 24 bit RGB color.
  - 980R: 7” diagonal; Resolution: 800 (h) x 480 (v); 24 bit RGB color.

- **Power**
  - 90-264 VAC, 47-63Hz

- **Weight**
  - 23.76 LBS, 10.78 Kg

- **Size**
  - 980B: Height: 15.25 in. (38.6 cm); Width: 14.57 in. (36.8 cm); Depth: 6.29 in. (15.9 cm)
  - 980R: Height: 6.29 in. (15.9 cm); Width: 15.25 in. (38.6 cm); Depth: 6.75 in. (17.1 cm)

- **Command Line Control**
  - Ethernet (RJ-45) for external GUI and telnet

- **Environmental**
  - Operating Temp: 32 to 104 (F); 0 to 40 (C)

**DisplayPort 1.4 / USB-C / eDP Video Generator / Protocol Analyzer**

**Video Generation and Analysis**
Testing up to 8.1 Gb/s Link Rates

**Link, FCC & DSC Compliance Suites now Approved!**

**Key Features**

- Run DisplayPort functional tests and protocol compliance tests up to full DP 1.4 specification
- Equipped with both DP standard and USB-C ports for Tx and Rx functionality—all tests feature support through either type of connector
- View Power Delivery (PD) negotiations for USB-C DP Alt Mode
- Run functional tests on displays and monitors up to 8.1 Gb/s link rates with large format and test pattern libraries
- Generate Display Stream Compression (DSC) select patterns and configure slices and video parameters
- Configure link training parameters to test display’s handling
- View EDID and DPID registers
- Access DSC Test CRC registers for accelerated verification of source DSC compression
- Test DP sources up to 8.1 Gb/s link rates; view incoming video and meta-data including DSC-compressed from a source device
- Capture and decode incoming video, protocol, and control packets—including Display Stream Compression (DSC) frames
- Monitor Aux Channel transactions as a DP source or sink
- Passively monitor Aux Channel between a source & display even at 8.1 Gb/s link rates
- Run DP 1.4 Link Layer Compliance tests on sources and sinks up to 8.1 Gb/s link rates
- Run DP 1.4 Forward Error Correction (FEC) compliance tests
- Run DP 1.4 Display Stream Compression (DSC) compliance tests for sources and sinks
- Run DCP-approved HDCP 2.2 compliance tests on DisplayPort sources, sinks and repeaters
- Run audio tests using programmable LPCM sine wave audio and compressed formats
- Run tests on embedded Display (eDP) 1.4b sources and panels using fast link training and ALPM
- Test eDP backlight control functions on panel using either backlight control pins or Aux Channel control commands

The Teledyne LeCroy quantumdata 980 DP1.4 USB-C/eDP Video Generator / Analyzer module provides an unprecedented combination of functional and compliance testing features for video, audio, and protocol of DisplayPort devices. The module supports 1.2, 2, 5.4, 8.1 & 8.1 Gb/s data rates on 1, 2 & 4 lanes on its Tx video generator port and its Rx analyzer port for both the standard DP ports and the new USB-C ports with DP Alt Mode.

The module’s protocol analyzer supports real-time analysis and deep analysis using captures of incoming DisplayPort streams from source devices including DSC/FEC compressed streams. The module’s video generator can be used for testing display devices, USB-C adapters, extenders, etc. The module is equipped with all the standard video timings and test patterns necessary for testing modern displays.

The 980 DP 1.4 Video Generator / Protocol Analyzer module supports a full suite of link layer compliance tests for both sources and sinks including compliance tests for forward error correction (FEC).

The full-size DP and USB-C Tx and Rx ports support Auxiliary Channel Analysis of the DP Aux Channel, and the USB-C ports support Aux Channel Analysis of the USB-C Configuration Channel. An included Aux Channel monitoring board supports passive monitoring of the DP aux channel via full-size DisplayPort connectors, between a source and display. This enables analysis of link training and HDCP interoperability between devices.

For developers of Embedded Display (eDP), the new module offers the hardware necessary to support a variety of optional eDP features. Initial support includes fast link training, alternate scrambler seed, Advanced Link Power Management (ALPM) and Tx backlight control. A pin header is available to provide access to the backlight Tx test feature.

The module can be equipped in the 9808 Test Platform and controlled either through the embedded 9808 GUI Manager or the PC-based GUI Manager.

**Source Testing**

The 980 DP 1.4 Video Generator / Analyzer module emulates a DP display device (sink) for analyzing source devices. There are two options for the analysis function for testing DisplayPort source devices:

- **Basic Analyzer** — Provides real-time viewing of video and metadata for functional testing.
- **Capture/Store Protocol Analyzer** — Provides capture and store of the main link including protocol and control packets, main stream attributes and secondary data.

**Display Testing**

The 980 DP 1.4 Video Generator / Analyzer module supports video, audio, and protocol functional testing of high-end DP displays. The module supports 1.2, 2, 5.4 & 8.1 Gb/s data rates on 1, 2 & 4 lanes on both its Tx ports and its Rx ports.

The module also supports DP 1.4 Link Layer DCP-2 compliance testing for DisplayPort source, sink and repeater devices and link layer compliance testing for sink devices.
**DISPLAY TESTS – VIDEO/AUDIO TESTING**

**Format Selection**

- **Audio Testing**
  - The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

**Link Training Control and Configuration**

- **LPCM Audio Testing**
  - The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

**NEW! Alt Mode Negotiation**

- **Audio Testing**
  - The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

**Protocol Testing**

- **Multi-Stream Transport**
  - The DP 1.4 Video Generator / Analyzer module emulates an MST source for testing an MST branch device or MST-capable monitor. Up to four (4) streams are supported with a depth of one. The Auxiliary Channel Analyzer (ACA) utility depicts the MST negotiations with the connected MST Rx device.

**Auxiliary Channel Analyzer**

- **Auxiliary Channel Analyzer**
  - The module’s Auxiliary Channel Analyzer (ACA) feature enables you to monitor the DP Aux Channel for link training and MST negotiations, HDCP transactions and EDID exchanges between the DP 1.4 module and a connected display. The ACA logs these events and assigns precise timestamps to them. You can view the details of each transaction. These ACA logs can be saved and disseminated for further analysis by colleagues and other subject matter experts.

**EDID Decode View**

- **EDID Decode View**
  - You can read the EDID and/or the DPCD of downstream MST nodes.

**DPCD Register View**

- **DPCD Register View**
  - You can read the EDID and/or the DPCD of downstream MST nodes.

**HDCP 2.2 Test**

- **HDCP 2.2 Test**
  - You can read the EDID and/or the DPCD of downstream MST nodes.

**DISPLAY TESTS - PROTOCOL TEST FEATURES**
**Video Generation**
The 980 DP 1.4 Video Generator / Analyzer module supports video and audio functional testing at link rates up to 8.1 Gb/s on 1, 2 and 4 lanes to support high resolution formats. The module has an extensive set of video formats and library of test patterns. You can set any pattern in motion to test motion artifacts with the Image Shift feature.

**Audio Testing**
The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

**Video Generation**
The 980 DP 1.4 Video Generator / Analyzer module supports video and audio functional testing at link rates up to 8.1 Gb/s on 1, 2 and 4 lanes to support high resolution formats. The module has an extensive set of video formats and library of test patterns. You can set any pattern in motion to test motion artifacts with the Image Shift feature.

**Audio Testing**
The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

**Link Training Control and Configuration**
The module’s link training control feature enables you to configure the link training parameters during testing. You can set limits on the lane count and link rate and allow the link training engine to establish link training based on those limitations or you can force link training parameters—lane count, link rate, voltage swing, pre-emphasis.

**LPCM Audio Testing**
The module offers a programmable LPCM audio sine wave generator enabling you to set the number of channels (up to 8), the amplitude, frequency, sampling rate and bit depth for uncompressed formats.

**Link Training Control and Configuration**
The module’s link training control feature enables you to configure the link training parameters during testing. You can set limits on the lane count and link rate and allow the link training engine to establish link training based on those limitations or you can force link training parameters—lane count, link rate, voltage swing, pre-emphasis.

**NEW! Alt Mode Negotiation**
The USB Type C Transmit connector participates in discovery, power contract negotiation, and DP Alt Mode negotiation. The protocol messages can be monitored on the Auxiliary Channel Analyzer (right).

**Protocol Testing**
The 980 DP 1.4 Video Generator / Analyzer module offers a variety of features for testing DisplayPort protocols. You can verify HDCP 1.3 and HDCP 2.2 authentication transactions between the module’s Tx port and a DP display. The module’s EDID Decode feature enables you to examine the EDID of the connected display in text. The DPCD Decode feature enables you to examine the DPCD registers of the connected display. You can read the EDID and/or the DPCD of downstream MST nodes.

**EDID Decode View**

**DPCD Register View**

**NEW! Alt Mode Negotiation**
The USB Type C Transmit connector participates in discovery, power contract negotiation, and DP Alt Mode negotiation. The protocol messages can be monitored on the Auxiliary Channel Analyzer (right).
SOURCE TESTS – CAPTURE & DECODE FOR DEEP ANALYSIS

Capture and Decode
The 980 DP 1.4 USB-C Video Generator / Analyzer captures and decodes the main link attributes in order to diagnose interoperability issues related to them. The Protocol Analyzer captures & stores main link data and provides visibility into main stream attributes, second-ary data elements, K-Characters and protocol errors. The Protocol Analyzer presents these elements on a graphical timeline and in a table. You can search for data and select any transaction in the table to view its details. The capture utility also enables you to capture specific MST streams from the source.

DP Alt Mode Negotiation
The 980 DP 1.4 USB-C Generator / Analyzer USB-C Rx connector participates in discovery, power contract negotiation, and DP Alt Mode negotiation. The protocol messages can be monitored on the Auxiliary Channel Analyzer.

(Passive) Auxiliary Channel Analyzer
The 980 DP 1.4 Video Generator / Analyzer module’s Adjunct Auxiliary Channel Analyzer board enables you to monitor the DP Aux Channel for link training and MST negotiations, HDCP transactions and EDID exchanges between a DisplayPort source and display device. This enables developers to investigate interoperability problems between DisplayPort devices involving link training, HDCP and EDID. Solution is provided using a custom cable provided by Teledyne LeCroy. The ACA logs these events and assigns precise timestamps to them. You can view the details of each transaction. These ACA logs can be saved and disseminated for further analysis by colleagues and other subject matter experts.

SOURCE TESTS - REAL TIME & AUX CHANNEL ANALYSIS

Real Time Analysis (Basic Analyzer)
The 980 DP 1.4 USB-C Video Generator / Analyzer’s Real Time analysis feature enables you to view the incoming video, lanes and link rate, timing, colorimetry and various other metadata in real time at a glance. The Real Time mode provides a basic confidence test to verify that the incoming video is essentially correct. The Rx port emulates any EDID on to test a source devices handling of various EDIDs. You can also configure DPCD registers for emulating on the DP Rx port using the DPCD Editor (below).

Aux Channel Analyzer
The 980 DP 1.4 USB-C Video Generator / Analyzer module’s Auxiliary Channel Analyzer (ACA) feature enables you to monitor the DP Aux Channel for link training and MST negotiations, HDCP transactions and EDID exchanges between the DP 1.4 module and a connected source. The ACA logs these events and assigns precise timestamps to them. You can view the details of each transaction. These ACA logs can be saved and disseminated for further analysis by colleagues and other subject matter experts.
Capture and Decode
The 980 DP 1.4 USB-C Video Generator / Analyzer captures and decodes the main link attributes in order to diagnose interoperability issues related to them. The Protocol Analyzer captures & stores main link data and provides visibility into main stream attributes, second ary data elements, K-Characters and protocol errors. The Protocol Analyzer presents these elements on a graphical timeline and in a table. You can search for data and select any transaction in the table to view its details. The capture utility also enables you to capture specific MST streams from the source.

DP Alt Mode Negotiation
The 980 DP 1.4 USB-C Generator / Analyzer USB-C Rx connector participates in discovery, power contract negotiation, and DP Alt Mode negotiation. The protocol messages can be monitored on the Auxiliary Channel Analyzer.

Capture and Decode (Filter View showing only Audio Packets)

Real Time Analysis (Basic Analyzer)
The 980 DP 1.4 USB-C Video Generator / Analyzer’s Real Time analysis feature enables you to view the incoming video, lanes and link rate, timing, colorimetry and various other metadata in real time at a glance. The Real Time mode provides a basic confidence test to verify that the incoming video is essentially correct. The Rx port emulates any EDID on to test a source devices handling of various EDIDs. You can also configure DPCD registers for emulating on the DP Rx port using the DPCD Editor (below).

Aux Channel Analyzer
The 980 DP 1.4 USB-C Video Generator / Analyzer module’s Auxiliary Channel Analyzer (ACA) feature enables you to monitor the DP Aux Channel for link training and MST negotiations, HDCP transactions and EDID exchanges between the DP 1.4 module and a connected source. The ACA logs these events and assigns precise timestamps to them. You can view the details of each transaction. These ACA logs can be saved and disseminated for further analysis by colleagues and other subject matter experts.

(Passive) Auxiliary Channel Analyzer
The 980 DP 1.4 Video Generator / Analyzer module’s Adjunct Auxiliary Channel Analyzer board enables you to monitor the DP Aux Channel for link training and MST negotiations, HDCP transactions and EDID exchanges between a DisplayPort source and display device. This enables developers to investigate interoperability problems between DisplayPort devices involving link training, HDCP and EDID. Solution is provided using a custom cable provided by Teledyne LeCroy. The ACA logs these events and assigns precise timestamps to them. You can view the details of each transaction. These ACA logs can be saved and disseminated for further analysis by colleagues and other subject matter experts.
**DISPLAY STREAM COMPRESSION (DSC) TESTING**

**DSC Analysis**
The 980 DP 1.4 Video Generator / Analyzer module’s DSC analysis feature enables developers to view the DisplayPort DSC related protocol elements such as the picture parameter set, end of chunk packets and compression flag settings in the VBID to ensure that these elements are occurring in the video stream and that they are occurring in the proper sequence. The DSC analysis feature also captures and decompresses the video frames enabling developers to examine them for compression artifacts. The Forward Error Correction (FEC) transport mechanism, which ensures reliable, error free video transport, can also be verified.

**ACA DPCD Reads for DSC Capabilities**
The 980 DP 1.4 Video Generator / Analyzer module’s ACA utility provides a log of the Aux Channel transactions. The link training can be viewed as well as the DPCD register reads and writes involved in the setup and maintenance of Display Stream Compression (DSC) and Forward Error Correction (FEC).

**Video Generation (DSC/FEC)**
The module’s DSC/FEC video generator feature enables display developers to transmit DSC/FEC streams. Users can selection from several test patterns and configure the colorimetry, bits per component, bits per pixel, line buffer bit depth and DSC slice configurations.

**DSC Compliance Approved!**
The 980 DSC source and sink compliance tests are ideal for pre-testing your DisplayPort source, sink or repeater product prior to submission to an Authorized Test Center for approval. Pre-testing provides assurance that your product will pass at the ATC when submitted. The compliance tests enable you to view the auxiliary channel analyzer traces logged during the test to help diagnose the cause of compliance test failures. (Refer to the test setups on the previous page.)

**DSC Source Tests**

980 DP 1.4 Video Generator / Analyzer module
Source Link Layer Compliance Approved!
The 980 DP source HBR3 link layer compliance tests are approved by VESA and are ideal for self-testing or pre-testing your HBR3-capable DisplayPort 1.4 source product prior to submission to an Authorized Test Center for approval. Pre-testing provides added assurance that your product will pass at the ATC when submitted. The compliance tests (below right) enable you to view the captured data and detailed test results which help pinpoint the cause of compliance test failures. The link layer compliance test suite now includes tests for NEW! forward error correction (FEC). You can link to the aux channel traces in the Aux Channel Analyzer (ACA) to view the root cause of failures (below).

DP 1.4 Source Link Layer Compliance - Test Selection

Sink Link Layer Compliance Approved!
The 980 DP sink (display) link layer compliance tests are ideal for pre-testing your DisplayPort 1.4 display product prior to submission to an Authorized Test Center for approval. Pre-testing provides added assurance that your product will pass at the ATC when submitted. The compliance tests (below right) enable you to view the captured data and detailed test results which help pinpoint the cause of compliance test failures. The link layer compliance test suite now includes tests for NEW! forward error correction (FEC). You can link to the aux channel traces in the Aux Channel Analyzer (ACA) to view the root cause of failures (below).

DP 1.4 Link Layer Source Compliance Test Results

DP Aux Channel Traces – From LLC Test

DP 1.4 Link Layer Source Compliance – Test Suite
Source Link Layer Compliance Approved!
The 980 DP source HBR3 link layer compliance tests are approved by VESA and are ideal for self-testing or pre-testing your HBR3-capable DisplayPort 1.4 source product prior to submission to an Authorized Test Center for approval. Pre-testing provides added assurance that your product will pass at the ATC when submitted. The compliance tests (below right) enable you to view the captured data and detailed test results which help pinpoint the cause of compliance test failures. The link layer compliance test suite now includes tests for NEW! forward error correction (FEC). You can link to the aux channel traces in the Aux Channel Analyzer (ACA) to view the root cause of failures (below).

Sink Link Layer Compliance Approved!
The 980 DP sink (display) link layer compliance tests are ideal for pre-testing your DisplayPort 1.4 display product prior to submission to an Authorized Test Center for approval. Pre-testing provides added assurance that your product will pass at the ATC when submitted. The compliance tests (below right) enable you to view the captured data and detailed test results which help pinpoint the cause of compliance test failures. The link layer compliance test suite now includes tests for NEW! forward error correction (FEC). You can link to the aux channel traces in the Aux Channel Analyzer (ACA) to view the root cause of failures (below).
Embedded DisplayPort eDP - ALPM

The 980 DP 1.4 USB-C/eDP Video Generator / Analyzer supports testing of both eDP source and display subsystems. A standard DP connection from the 980 DP 1.4 eDP-capable module to a test fixture is required to enable connection to the eDP subsystem. For display panel TCON testing, once the connection is made, you can use the Advanced Link Power Management (ALPM) feature to test the display's ALPM function (right) and run any other video tests using the DP 1.4 module's Video Generation function. For eDP source subsystem testing, you can monitor the link training and ALPM state and run captures for analysis, etc. The test setups are depicted below.

HDCP 2.2 Compliance DCP Approved!

The 980 HDCP 2.2 compliance tests are ideal for pre-testing your DisplayPort source, sink or repeater product prior to submission to an Authorized Test Center for approval. Pre-testing provides assurance that your product will pass at the ATC when submitted. The compliance tests enable you to view the auxiliary channel analyzer traces logged (not shown) during the test to help diagnose the cause of compliance test failures.

NEW! eDP Fast Link Training

The 980 DP 1.4 USB-C/eDP Video Generator / Analyzer supports fast link training acting either as an eDP source subsystem or an eDP display subsystem. The module emulates the necessary Fast Link training DPCD registers. When testing a display you can select the Lane Count, Link rate (including “intermediate” eDP lane rates), Voltage Swing, Pre-Emphasis and Training Test Pattern. You can monitor the Aux Channel transactions with the 980 Aux Channel Analyzer utility. (eDP Fast Link Training Source test not shown.)

Embedded DisplayPort eDP - ALPM

Advanced Link Power Management (ALPM)

Link Training Control and Configuration

Auxiliary Channel Analyzer – Fast Link Train

eDP Tx Backlight Control

HDCP 2.2 Source, Sink & Repeater Compliance
The 980 DP 1.4 USB-C/eDP Video Generator / Analyzer supports testing of both eDP source and display subsystems. A standard DP connection from the 980 DP 1.4 eDP-capable module to a test fixture is required to enable connection to the eDP subsystem. For display panel TCON testing, once the connection is made, you can use the Advanced Link Power Management (ALPM) feature to test the display’s ALPM function (right) and run any other video tests using the DP 1.4 module’s Video Generation function. For eDP source subsystem testing, you can monitor the link training and ALPM state and run captures for analysis, etc. The test setups are depicted below.

**eDP Fast Link Training**

The 980 DP 1.4 USB-C/eDP Video Generator / Analyzer supports fast link training acting either as an eDP source subsystem or an eDP display subsystem. The module emulates the necessary Fast Link training DPCD registers. When testing a display you can select the Lane Count, Link rate (including “intermediate” eDP lane rates), Voltage Swing, Pre-Emphasis and Training Test Pattern. You can monitor the Aux Channel transactions with the 980 Aux Channel Analyzer utility. (eDP Fast Link Training Source test not shown.)

**eDP Tx Backlight Control**

The 980 DP 1.4 USB-C/eDP module supports testing of the eDP backlight control function on eDP TCON display subsystems. Backlight control is supported through the Aux Channel and the backlight control lead. The connection is made through the module’s eDP header pins on the faceplate. You can select between High and Low backlight enable, set the PWM duty cycle, pre-scaling and PWM generator divider.

**HDCP 2.2 Compliance DCP Approved!**

The 980 HDCP 2.2 compliance tests are ideal for pre-testing your DisplayPort source, sink or repeater product prior to submission to an Authorized Test Center for approval. Pre-testing provides assurance that your product will pass at the ATC when submitted. The compliance tests enable you to view the auxiliary channel analyzer traces logged (not shown) during the test to help diagnose the cause of compliance test failures.
**DisplayPort 1.4 / USB-C / eDP Module**

**Version**
DisplayPort 1.4a

**Standard Formats**
VES, CTA

**Connectors/Ports**
- **DP Full-Size**
  - Tx (1) DP Full-size: Rx (1) DP Full-size
- **USB-C**
  - Tx (1) USB-C with DP Alt Mode; Rx (1) USB-C with DP Alt Mode
- **eDP Header**
  - Pins to access eDP Tx backlight controls
- **Aux Chan Adjunct Board**
  - Tx (1), DP Full-size: Rx (1) DP Full-size

**Protocol**
DisplayPort

**Video Data Rates**
1.2, 2.7, 5.4, 8.1 Gb/s: Link rates

**Color Depths**
8, 10, 12, 16 bits

**Video Encoding**
RGB, YCbCr

**Video Sampling Modes**
4:4:4, 4:2:2, 4:2:0

**HDCP**
Versions 2.2 & 1.6 (1 & 2 lanes only)

**Audio**
8 Channel LPCM programmable sine wave

**Capture memory**
8 Gbytes

**Options**
- **DisplayPort Tx / Rx**
  - Either or both:
    - DP Tx for display testing: selectable between DP Standard and USB-C
    - DP Rx port, two options: selectable between DP Standard and USB-C
  - **Basic Analyzer**
  - **Capture/Store Protocol Analyzer (requires basic analyzer option)**
  - **DP Passive Aux Channel Analyzer**
  - **DP Capture Analysis of DSC Streams**
  - **DP Video Generation of DSC/FEC Streams**
  - **DP/HDCP 2.2 Compliance Test**
  - **DP 1.4 Source Link Layer Compliance (Package #3)**
  - **DP 1.4 Sink Link Layer Compliance (Package #4)**
  - **DP 1.4 Source DSC Compliance (Package #4)**
  - **NEW! DP 1.4 Sink DSC Compliance**

**Embedded Display (eDP) 1.4b**
Test eDP source and display devices using fast link training. Advanced Link Power Management (ALPM) and backlight control test of displays.

**quantumdata™ 980**

**DisplayPort 1.4 / USB-C / eDP Video Generator / Protocol Analyzer**

**Video Generation and Analysis Testing**
Up to 8.1 Gb/s: Link Rates

**Link, FEC & DCC Compliance Suites now Approved!**

**Key Features**
- Run DisplayPort functional tests and protocol compliance tests up to full DP 1.4 specification
- Equipped with both DP standard and USB-C ports for Tx and Rx function—all test features are supported through either type of connector
- View Power Delivery (PD) negotiations for USB-C DP Alt Mode
- Run functional tests on displays and monitors up to 8.1 Gb/s link rates with large format and test pattern libraries
- Generate Display Stream Compression (DSC) select patterns and configure slices and video parameters
- Configure link training parameters to test display’s handshaking
- View EDID and DPDC register
- Access DCC Test CRC registers for enhanced verification of source DCC compression
- Test DP sources up to 8.1 Gb/s link rates; view incoming video and metadata including DCC compressed—from a source and sink
- Capture and decode incoming video, protocol and control packets—including Display Stream Compression (DSC)
- Monitor Aux Channel transactions as a DP source or sink
- Passively monitor Aux Channel between a source & display even at 8.1 Gb/s link rates
- Run DP 1.4 Link Layer compliance tests on sources and sinks up to 8.1 Gb/s link rates
- Run DP 1.4 Forward Error Correction (FEC) compliance tests
- Updated! Run DP 1.4 Display Stream Compression (DSC) compliance tests for sources and sinks
- Run DCC-approved HDCP 2.2 compliance tests on DisplayPort sources, sinks and repeaters
- Run audio tests using programmable LPCM sine wave audio and compressed formats
- Run tests on embedded DisplayPort (eDP) 1.4b sources and panels using fast link training and ALPM
- Test eDP backlight control functions on panel using either backlight control pins or Aux Channel control commands

The Teledyne LeCroy quantumdata 980 DP1.4 USB-C/eDP Video Generator/Analyzer module provides an unprecedented combination of functional and compliance testing for video, audio, and protocol of DisplayPort devices. The module supports 1.2, 2.7, 5.4, 8.1 & 8.1 Gb/s data rates on 1, 2 & 4 lanes on its Tx video generator port and its Rx analyzer port for both the standard DP ports and the new USB-C ports with DP Alt Mode.

The module’s protocol analyzer supports real-time analysis and deep analysis using captures of incoming DisplayPort streams from source devices including DSC/FEC compressed streams. The module’s video generator can be used for testing displays, USB-C adapters, extenders, etc. The module is equipped with all the standard video timings and test patterns necessary for testing modern displays.

The 980 DP 1.4 Video Generator / Protocol Analyzer module supports a full suite of link layer compliance tests for both sources and sinks including compliance tests for forward error correction (FEC).

The full-size DP and USB-C Tx and Rx ports support Auxiliary Channel Analysis of the DP Aux Channel, and the USB-C ports support Aux Channel Analysis of the USB-C Configuration Channel. An included Aux Channel monitoring board supports passive monitoring of the DP aux channel via full-size DisplayPort connectors, between a source and display. This enables analysis of link training and HDCP interoperability between devices.

For developers of Embedded DisplayPort (eDP), the new module offers the hardware necessary to support a variety of optional eDP features. Initial support includes fast link training and 8k/4k and sub-sampling compliance, Advanced Link Power Management (ALPM) and Tx backlight control. A pin header is available to provide access to the backlight Tx test feature.

The module can be equipped in the 980B Test Platform and controlled either through the embedded 980 GUI Manager or the PC-based GUI Manager.

---

**Source Testing**

The 980 DP 1.4 Video Generator / Analyzer module emulates a DP display device (sink) for analyzing source devices. There are two options for the analysis function for testing DisplayPort source devices:
- **Basic Analyzer** — Provides real time viewing of video and metadata for functional testing
- **Capture/Store Protocol Analyzer** — Provides capture and store of the main link including protocol and control packets, main stream attributes and secondary data

**Display Testing**

The 980 DP 1.4 Video Generator / Analyzer module supports video, audio and protocol functional testing of high-end DP displays. The module supports 1.2, 2.7, 5.4 & 8.1 Gb/s data rates on 1, 2 & 4 lanes on both its Tx ports and its Rx ports.

The module also supports DP 1.4 Link Layer and HDP 2.2 compliance testing for DisplayPort source, sink and repeater devices and link layer compliance testing for sink devices.
